

TJA3 11/7 Meeting Summary

Leader: Abhinay Devapatla

Tasks:

- Abhinay needs to ask about individual webpages during class
- All members need to come up with a skeleton use case diagram by Tuesday afternoon

Summary:

We started the meeting by discussing the individual webpages. We all agreed that there was not a lot of information about them on the course site and it would be best if Abhinay inquired about the web pages before we began working on them. Eric then gave an update on the website. He said he learned a few new tricks to get the website looking cleaner and he would try to shrink the size of each of our pictures to conserve space. Finally we spent the majority of our time discussing our use case diagram. We looked over our new requirements list and brainstormed possible actors and scenarios. We all concurred that it would be helpful if everyone created an individual use case skeleton before our next meeting. After that the meeting ended and everyone said their goodbyes.

Minutes: 40min 6:00-6:40
