

TJA3 11/9 Meeting Summary

Leader: Abhinay Devapatla

Tasks:

- Abhinay needs to add the finishing touches to the Use Case Diagram based off of this meetings feedback
- Abhinay needs to add the finishing touches to the Conceptual Domain Model based off of this meetings feedback
- Everyone needs to review and provide feedback for both the Use Case Diagram and the Conceptual Domain Model

Summary:

This meeting was mostly spent reviewing the individual Use Case diagram drafts that each member created. We all agreed that Muxing's diagram was extremely close to what everyone wanted the final Use Case diagram to look like, however Abhinay said he had some tweaks to make before he could turn it in. To end the meeting we spent some time brainstorming ideas for the Conceptual Domain Model. We focused on getting down all the pieces of the system and their relationships for example the lane management system and the gps system. Finally Abhinay said he would create the final drafts of these and it was everyone's job before we turn them in to review and provide feedback on these drafts.

Minutes: 30min 6:30-7:00
